Greeting from Conference Chairman

Good afternoon

Ladys and gentlemen

On behalf of the conference committee to express congratulations on the convening of 16th International Conference on Signal Processing and to extend our warm and cordial greeting to you, all the experts, scholars, professors and students from other countries and from China to the ICSP2022.

Sponsored by Beijing Jiaotong University, IEEE Beijing Section, IET Beijing Local Network, the 16th ICSP 2022 is one of the ICSP conference series, which began from 1990 in Beijing. During the past 32 years the theory and technology of signal processing have been advanced extremely quickly and spread widely in all the disciplines of engineering and scientific fields. Signal processing has also a great effect on the day-to-day life of the human beings. To keep the pace with the technology development and the state of art of applications. As you know, the International Conference on Signal Processing has gone through 32 years. And we would like to thank experts and scholars from all levels of organizations at home and abroad and from the wider signal processing community for their support to the Conference.

In addition, due to the impact of COVID-19, this session we have to take the combination of online and offline way to hold. Fortunately, the Internet is so developed today, so that the conference also has the effect of gathering together. I am sure that the participants in this conference will also benefit from the report and exchange of the meeting. The 16th ICSP2022 will bring together diversity of authors and speakers from many nations and regions to share ideas and new perspectives in both theoretical and practical aspects of signal processing.

As you know, the conference includes a lot of new hot topics, which was being developed during recent a few years. For example it includes signal analysis of big data, sparse representation and feature detection, 2D/3D video compression and retrieval, artificial Intelligent and deep

learning and so on.

In addition, we are also honored to have invited three special keynote speakers. They are professor Weisi LIN from Nanyang Technological University, whose lecture topic is Quality Evaluation of Computer Generated & Partially-generated Visual Signals; Professor Junhui HOU from City University of Hong Kong, whose lecture topic is Learning to Enhance 3D Point Clouds: from Static to Dynamic; Professor Su RUAN from University of Rouen Normandy, whose lecture topic is Segmentation of multimodal medical images. I believe that all of us will benefit from wonderful keynote speeches. So let us say welcome to keynote speakers. As the organizer of conference we would like to extend my appreciation to all authors for contributing their excellent research papers as well as reviewers for their hard work in evaluating the large number of the Technical Committee members.

We have to express the special thanks to our conference patrons such as SPS of Chinese Institute of Electronics, IET, URSI, National Natural Science Foundation of China, IEEE Signal Processing Society Beijing Chapter, IEEE Computer Society Beijing Chapter, Japan China Science and Technology Exchange Association, CIC Communication and Signal Processing society and Beijing institute of electronics and so on.

Finally, I wish a successful round-off to the 16th international conference on Signal Processing. I also wish all the participants good health and a happy life. Thank you very much.

RUAN Qiuqi
General Chair
ICSP2022

Message from Technical Program Chairman

Ladies and gentlemen! Everybody is good!

On behalf of the Conference Program Committee, please allow me to express our warm welcome and thanks to all the guests for attending this international signal processing conference! In the past 32 years, the IEEE ICSP Signal Processing Conference has experienced 15 times, this year's is the 16th one.

Signal processing, as an information science, intelligent science, big data and Internet based processing technology, has a wide range of applications, and have been applied in many fields. In this year's meeting, despite the serious situation of the epidemic, we still received a considerable number of papers, which were reviewed by the program committee, and 108 papers were accepted for the conference exchange! From the point of view of the paper content and units employed, it reflects that, research topics, research units and research contents are extensive and very in-depth, the practicability of all research results has been significantly enhanced.

We have invited three keynote speakers for this meeting. They are Prof.

Weisi Lin, Prof. Junhui Hou and Prof. Su Ruan. Due to traffic, some of them can only give reports online. Fortunately, the development of the network technology allows us may still reach the goals and achieve the effects of academic exchanges. The Program Committee appreciates very much for their efforts and contributions.

For the smooth opening of the conference, the staff members, paper reviewers and relevant departments, while completing their own work, have contributed a lot of labor to the conference. Let me also on behalf of the organizing committee express my great gratitude to them!

Wish the meeting a successful start! I wish all of you a fruitful academic exchange at the conference! Thank you very much!

WEI Shikui

Technical Program Chair

ICSP2022 Keynote Speech

Title:

Quality Evaluation of Computer Generated & Partially-generated Visual Signals

Abstract:

With rapid advancement of visual signal acquisition, computing and networking, there are more and more scenarios to make use of computer generated (artificial) or partially-generated images and videos. Meaningful visual signals can be generated by computer graphics (CG) for VR, AR and even the emerging metaverse. In addition, partial visual content may be also generated as screen-content, retargeted, stitched, HDR tone-mapped, style-transferred, and DIBR images; various applications include screen capturing/analysis/matching, multi-client communication, content editing, remote education, native advertisement, and data augmentation for training. In this talk, different computational models are to be presented toward quality evaluation of generated or partially-generated visual signals, and their potential extensions and future directions will be also discussed, since quality assessment plays crucial roles in benchmarking and shaping related algorithms and systems.

Bio:

Weisi Lin researches in intelligent image and video processing, computational perceptual signal assessment, and multi-modality/media modeling. He received his B.Sc and M. Sc from Sun Yat-Sen University, China, and Ph.D. from King's College, U.K. He is currently a Professor in School of Computer Science and Engineering, Nanyang Technological University, Singapore, where he also serves as the Associate Chair (Research).

He is a Fellow of IEEE and IET, and has been a Highly Cited Researcher 2019, 2020 and 2021. He has elected as a Distinguished Lecturer in both IEEE Circuits and Systems Society (2016-17) and Asia-Pacific Signal and Information Processing Association (2012-13), and given keynote/invited/tutorial/panel talks in 40+ international conferences. He has been an Associate Editor for IEEE Trans. Neural Networks and Learning Syst., IEEE Trans. Image Process., IEEE Trans. Circuits Syst. Video Technol., IEEE Trans. Multimedia, IEEE Signal Process. Lett., Quality and User Experience, and J. Visual Commun. Image Represent., and a Senior Editor in APSIPA Trans. Info. and Signal Process, as well as a Guest Editor for 7 special issues in international journals. He also chaired

the IEEE MMTC QoE Interest Group (2012-2014); he has been a Technical Program Chair for IEEE ICME 2013, QoMEX 2014, PV 2015, PCM 2012 and IEEE VCIP 2017. He leads the Temasek Foundation Programme for AI Research, Education & Innovation in Asia, 2020-2025. He believes that good theory is practical, and has delivered 10+ major systems for industrial deployment with the technology developed.

Title:

Learning to Enhance 3D Point Clouds: from Static to Dynamic

Abstract:

3D point cloud data are widely used in immersive telepresence, cultural heritage reconstruction, geophysical information systems, autonomous driving, and virtual/augmented reality. Despite rapid development in 3D sensing technology, acquiring 3D point cloud data with high spatial and temporal resolution and complex geometry/topology is still time-consuming, challenging, or costly. This talk will present our recent studies on computational methods (i.e., deep learning)-based 3D point cloud reconstruction, including sparse 3D point cloud upsampling, 3D point cloud generation, and temporal interpolation of dynamic 3D point cloud sequences.

Bio:

Junhui Hou is an Assistant Professor with the Department of Computer Science, City University of Hong Kong. His research interests fall into the general areas of multimedia signal processing, such as image/video/3D geometry data representation, processing and analysis, graph-based data modeling, and data compression.

He received the Chinese Government Award for Outstanding Students Study Abroad from China Scholarship Council in 2015 and the Early Career Award (3/381) from the Hong Kong Research Grants Council in 2018. He is an elected member of IEEE MSA-TC, VSPC-TC, and MMSP-TC. He is currently an Associate Editor for IEEE Transactions on Image Processing, IEEE Transactions on Circuits and Systems for Video Technology, Signal Processing: Image Communication, and The Visual Computer. He also served as an Area Chair of various international conferences, including ACM MM, IEEE ICME, VCIP, ICIP, MMSP, and WACV.

Title:

Segmentation of multimodal medical images

Abstract:

In order to better delineate the tumor contour for its treatment, several medical imaging examinations, such as CT and PET images, are necessary for patients. The work to segment the tumor from multimodal images is an important issue for the diagnostic, radiotherapy or cancer outcome prediction. The challenge is how to efficiently fuse the multi-sources of information to improve tumor segmentation performance. In addition, it's common to have some missing MRI modalities in clinical practice due to different acquisition protocol, image corruption, scanner availability or scanning cost. Missing data make tumor segmentation even more difficult. In this talk, I will present our work which are based on deep learning to exploit latent features and fuse them to improve segmentation performance in the case of complete modalities or missing modalities. The proposed methods are applied on Brats MICCAI challenge datasets to show the good performance of our methods.

Bio:

Su RUAN received the M.S. and the Ph.D. degrees in image processing from the University of Rennes, France, in 1989 and 1993, respectively. From 2003 to 2010, she was a Full Professor with the University of Reims Champagne-Ardenne, France. She is currently a Full Professor with the Department of Medicine, Rouen Normandy University, France. Her research interests include pattern recognition, machine learning, information fusion, and medical imaging. She is currently an Associate Editor for Computerized Medical Imaging and Graphic, IRBM and Array. She served also as an Area Chair of various international conferences, such MICCAI et IEEE-ISBI.

PaperID: SS.Qu0031; Proc. Pages:354
- SQu-03 FEATURE CROSS FUSION - ATTENTION MECHANISM FOR INTELLIGENT SEMANTIC SEGMENTATION OF SURFACE FEATURES AROUND RAILWAY
Xuesong Fu; Changjin Wang; Jianlin Wang; Zujie Han; Chunyu Qi
PaperID: SS.Qu0032; Proc. Pages:359
- SQu-04 LTE-R COMMUNICATION QUALITY PREDICTION BASED ON ECA-TCN AND EEMD
Jiantao Qu; Chunyu Qi; Gaoyun An; Yuxiang Ma
PaperID: SS.Qu0068; Proc. Pages:365
- SQu-05 DISTRIBUTED ACOUSTIC SENSOR SIGNAL DENOISING METHOD BASED ON CEEMDAN-MPE
Meng He; Zichao Wang; Jiantao Qu
PaperID: SS.Qu0096; Proc. Pages:371
- SQu-06 RESEARCH ON INTELLIGENT CONSTRUCTION TECHNOLOGY OF PREFABRICATED RAILWAY BRIDGE
Chenglong Qi; Yan Li
PaperID: SS.Qu0111; Proc. Pages:375
- SQu-07 STUDY ON MECHANISM OF DEEP SCREW PLATE LOADING TEST
Pengcheng Ma; Run Liu; Guohe Li; Peng Li; Xinjun Chen
PaperID: SS.Qu0116; Proc. Pages:379
- SQu-08 OPTIMAL DESIGN OF DCS SUBSYSTEM MONITORING FOR URBAN RAIL TRANSIT SIGNAL SYSTEM UNDER CROSS-LINE NETWORK
Cheng Liang; Xinzheng Yang; Xujie Feng; Shuhao Liu
PaperID: SS.Qu0118; Proc. Pages:384

- SQu-09 TOP-DOWN DESIGN METHOD OF STATION SUBGRADE SURFACE BIM MODEL
BASED ON CONSTITUTING SURFACE METHOD WITH MULTI-CHARACTERISTIC
LINES
Kaijun Wang; Ran An; Xinyu Liu; Jiantao Qu
PaperID: SS.Qu0129; Proc. Pages:401
- SZhu-O1 AN END-TO-END FRAMEWORK FOR UNIVERSAL LESION DETECTION WITH
MISSING ANNOTATIONS
Xiaoyu Bai; Yong Xia
PaperID: SS.Zhu0035; Proc. Pages:411
- SZhu-O10 ACCELERATING MULTI-ECHO MRI IN K-SPACE WITH COMPLEX-VALUED
DIFFUSION PROBABILISTIC MODEL
Ying Cao; Lihui Wang; Jian Zhang; Hui Xia; Feng Yang; Yuemin Zhu
PaperID: SS.Zhu0087; Proc. Pages:479
- SZhu-O2 FEW-SHOT LEARNING FOR BRAIN TUMOR SEGMENTATION FROM MRI IMAGES
Abdelouahad Achmamad; Fethi Ghazouani; Su Ruan
PaperID: SS.Zhu0095; Proc. Pages:489
- SZhu-O3 MULTI-INSTANCE CLASSIFICATION OF HISTOPATHOLOGICAL BREAST
CANCER IMAGES WITH VISUAL EXPLANATION
*Feng He; Yuemin Zhu; Weibo Wang; Abiyasi Nanding; Zixiang Kuai; Xiaomei Li;
Zhengjun Liu*
PaperID: SS.Zhu0052; Proc. Pages:431
- SZhu-O4 CONTINUAL LEARNING OF MEDICAL IMAGE CLASSIFICATION BASED ON
FEATURE REPLAY
Xiaojie Li; Haifeng Li; Lin Ma
PaperID: SS.Zhu0050; Proc. Pages:426
- SZhu-O5 SET-VALUED MEDICAL IMAGE CLASSIFICATION WITH EVIDENTIAL CNN: A
FIRST TEST WITH COVID-19 DATASET
Lele Dong; Lunde Chen; Suyao Kong; Siyuan Gu; Wanyu Liu; Shuimiao Du
PaperID: SS.Zhu0081; Proc. Pages:463
- SZhu-O6 GLIOMA GRADE PREDICTION USING A CROSS-FUSION NETWORK BASED ON
UNSEGMENTED MULTI-SEQUENCE MAGNETIC RESONANCE IMAGES
Qijian Chen; Lihui Wang; ShunChao Guo; Hui Xia; Feng Yang; Yuemin Zhu
PaperID: SS.Zhu0074; Proc. Pages:447

- SZhu-O7 MORTALITY PREDICTION WITH BIDIRECTIONAL COUPLED AND GUMBEL SUBSET NETWORK ON IRREGULARLY MULTIVARIATE TIME SERIES
Qinfen Wang; Siyuan Ren; Yong Xia
PaperID: SS.Zhu0082; Proc. Pages:468
- SZhu-O8 MR IMAGE SYNTHESIS USING RIEMANNIAN GEOMETRY CONSTRAINED IN VAE
Jannane Nada; Jérôme Lapuyade-Lahorgue; Fethi Ghazouani; Sébastien Bougleux; Su Ruan
PaperID: SS.Zhu0094; Proc. Pages:485
- SZhu-O9 EFFECT OF DIFFERENT CONFIGURATIONS OF DIFFUSION GRADIENT DIRECTIONS ON ACCURACY OF DIFFUSION TENSOR ESTIMATION IN CARDIAC DTI
Yunlong He; Lihui Wang; Feng Yang; Patrick Clarysse; Marc Robini; Yuemin Zhu
PaperID: SS.Zhu0053; Proc. Pages:437
- SZhu-P1 AN IMPROVED ALGORITHM COMBINING ATTENTION MECHANISM AND FEATURE FUSION FOR CIRCULATING TUMOR CELLS DETECTION
Mingcan Chen; Xiaolei Li; Jingjing Xu; Wanyu Liu
PaperID: SS.Zhu0047; Proc. Pages:416
- SZhu-P2 IMPACT OF MR SEQUENCES CHOICE ON DEEP LEARNING SEGMENTATION OF MUSCLES
Maylis Jouvencel; Hoai-Thu Nguyen; Magalie Viallon; Pierre Croisille; Thomas Grenier
PaperID: SS.Zhu0049; Proc. Pages:420
- SZhu-P3 GST: A BRAIN-INSPIRED GRAPH SIGNAL TRANSMITTER FOR BIOMEDICAL IMAGE SEGMENTATION
Caiqing Jian; Yongbin Qin; Lihui Wang; Hui Xia; Yuemin Zhu
PaperID: SS.Zhu0070; Proc. Pages:442
- SZhu-P4 ADAPTIVE TEMPORAL INFORMATION FUSION NETWORK FOR IN VIVO CARDIAC DTI MOTION COMPENSATION
Zeyu Deng; Lihui Wang; Chen Ye; Ying Cao; Feng YANG; Yuemin ZHU
PaperID: SS.Zhu0075; Proc. Pages:452
- SZhu-P5 A DUAL-FLOW NEURAL NETWORK FOR MEDICAL IMAGE REGISTRATION
Kun Tang; Lihui Wang; Xinyu Cheng; Hui Xia; Feng Yang; Yuemin Zhu
PaperID: SS.Zhu0077; Proc. Pages:458

Program

PT: Paris time/**BT:** Beijing time=PT+6h (7:55am PT/1:55pm BT)

October 24, 2022 (7:55am PT/1:55pm BT)

7:55am PT Introduction to MAI Workshop:
Patrick CLARYSSE, Yuemin ZHU (CREATIS, Université de Lyon & IRP METISLAB)

Oral session 1, Detection, segmentation, classification. Chair: WANG Lihui (Guizhou University)

8:00am PT: An End-to-End Framework For Universal Lesion Detection With Missing Annotations
Xiaoyu BAI et al.
Northwestern Polytechnical University

8:15am PT: Few-shot learning for brain tumor segmentation from MRI images
abdelouahad ACHMAMAD et al.
LITIS, University of Rouen

8:30am PT: Multi-Instance Classification of Histopathological Breast Cancer Images with Visual Explanation,
Feng HE et al.
CREATIS, Université de Lyon; Harbin Institute of Technology

8:45am PT: Continual learning of medical image classification based on feature replay
Xiaojie LI et al.
Harbin Institute of Technology

Oral session 2, Classification & Prediction. Chair: ZHAO Yue (Harbin Institute of Technology)

09:00am PT: Set-Valued Medical Image Classification with Evidential CNN: A First Test with Covid-19 Dataset
Lele DONG et al.
Shanghai University

09:15am PT: Glioma grade prediction using a cross-fusion network based on unsegmented multi-sequence magnetic resonance images
Qijian CHEN et al.
College of Computer Science and Technology, Guizhou University ; CREATIS, Université de Lyon

09:30am PT: Mortality Prediction with Bidirectional Coupled and Gumbel Subset Network on Irregularly Multivariate Time Series
Qinfen WANG et al.
Northwestern Polytechnical University

09:45am PT: *Break*

Oral session 3, Image synthesis & cardiac MRI. Chair: GRENIER Thomas (CREATIS, INSA-Lyon)

- 10:00am PT: MR image synthesis using Riemannian geometry constrained in VAE
Jannane NADA et al.
Dpt Computer Sciences, Aix-Marseille University; LITIS, University of Rouen; GREYC University of Caen
- 10:15am PT: Effect of different configurations of diffusion gradient directions on accuracy of diffusion tensor estimation in cardiac DTI
Yunlong HE et al.
CREATIS, Université de Lyon ; College of Computer Science and Technology, Guizhou University
- 10:30am PT: Accelerating multi-echo MRI in k-space with complex-valued diffusion probabilistic model
Ying CAO et al.
College of Computer Science and Technology, Guizhou University ; CREATIS, Université de Lyon

Poster session, Chair: XU Jingjing (Shanghai University)

- 10:45am PT: Flash poster presentations (3')
- An improved algorithm combining attention mechanism and feature fusion for circulating tumor cells detection
Mingcan CHEN et al.
Shanghai University
 - Impact of MR sequences choice on deep learning segmentation of muscles
Maylis JOUVENCEL et al.
CREATIS, Université de Lyon
 - GST: A Brain-Inspired Graph Signal Transmitter for Biomedical Image Segmentation
Caiqing JIAN et al.
College of Computer Science and Technology, Guizhou University ; CREATIS, Université de Lyon
 - Adaptive temporal information fusion network for in vivo cardiac DTI motion compensation
Zeyu DENG
College of Computer Science and Technology, Guizhou University ; CREATIS, Université de Lyon
 - A dual-flow neural network for medical image registration
Kun TANG et al.
College of Computer Science and Technology, Guizhou University ; CREATIS, University of Lyon
 - Spatial Attention based Semantic Decouple Network for Breast Tumor Segmentation
Li WANG et al.
College of Computer Science and Technology, Guizhou University ; CREATIS, University of Lyon
 - Cardiac strain measurement with DENSE MRI: a review
Zinan LIU et al.
Shanghai University; CREATIS, University of Lyon
- 11:10am PT: Discussion in the poster room
- 11:40am PT: Open discussion: collaborative actions and future of MAI workshops
- 12:00am PT: End of the workshop.
